

Group project description

Jessica Shangcao Yuan

For this project, our group discussed ideas via Facebook. We had three different objects for options, such as some cloth, wood and wine glasses. We were thinking about some beautiful stuff with a little function. So beautiful design is very important for our group. Finally, we decided to do something interactive with wine glasses. I made a draft that to dress up the wine glasses and make it look like a lady. I was thinking three different parts that could suggest the wine glasses is a lady, so I decided to do a dress, a hat and a bag for the lady glasses. I talked to my group members and they thought we could do that. I did the hat, Lian did a little bag and Niki did the dress.

I tried to use 3D Max to do the module, which is a challenging for me because I never used that before. I look at the tutorial online and ask Lian and technique person for help. The difficulty of printing was that I did not know what the exact size when it will print out. Also, the print got stuck, the material could not come out. I spent a lot of time on printing because failed to print for three times.
